K-KSB

Static Balance Devices

The K-KSB Series Static Balancing Devices offer a highly precise and reliable solution for single-plane balancing, featuring state-of-the-art calibration and measurement algorithms.

Unlike other devices, K-KSB systems require no ramp-up waiting time-users can begin balancing within seconds by simply connecting a USB cable. The user-friendly interface software provides step-by-step guidance throughout the measurement process, ensuring efficiency and ease of use.

Through a four-point measurement system, accurate results are automatically calculated, while clear markings on the measurement table assist in precise weight placement.

TECHNICAL SPECS

Model	Payload Limits*	Balancing Accuracy	Measurement Time	CG Accuracy
K-KSB-XXV	1-25 kg	15 gmm	> 5 seconds	0.5 mm / 0.15 mm
K-KSB-C	5-100 kg	30 gmm	> 5 seconds	1.0 mm / 0.25 mm
K-KSB-CCC	15-300 kg	250 gmm	> 10 seconds	1.5 mm / 0.35 mm
K-KSB-D	25-500 kg	500 gmm	> 15 seconds	2.0 mm / 0.50 mm
K-KSB-M	50-1000 kg	750 gmm	> 15 seconds	2.5 mm / 0.50 mm
